APPROXIMATE PREVENTATIVE MAINTENANCE COST FOR BENTGRASS TEES PER SEASON

Somewhere between March 15 and April 1 apply RegalStar II for crabgrass and goosegrass control. Begin in April and spray on a ten (10) day schedule through May with Daconil Ultrex at 5 lb. per acre for most diseases along with CPR at 2 gallons per acre at least three (3) times in these two (2) months.

June, July, and August, during peak stress, I suggest:

- 1st week – Daconil & Heritage
- 2nd week – Banner Maxx, CPR and HHI
- 3rd week – Pythium Control
- 4th week – Foliar Feed and CPR

September and October – Daconil twice per month

November – Snow mold control
