ORGANIC AMENDMENTS FOR PRE PLANT MIXES

Whether it be sand or soil, I always suggest adding some additional organic matter.

There are four (4) excellent sources of Organic Matter.

- Sand-Aid - Granular sea weed meal
- GroWin - Combo of sea weed and other organic meals
- System One - Composted, odor free, weed free manure
- EarthWorks - Chicken compost

I suggest one ton of System One, five hundred (500) lbs each of GroWin and Earthworks or Sand-Aid per acre tilled into the top four (4) to six (6) inches of top soil. Then apply Starter at seven (7) lbs per 1,000 sq ft., or 300 lbs per acre with seed or sod.

Cost per acre would be approximately \$1,600.00.

Note: If you sod, as soon as the sod gets out of transplant shock, then apply RegalStar II for season long crabgrass and goosegrass control.
Additional cost \$240.00 per acre

Note: If you're seeding, then change the starter fertilizer to Lebanon 12-24-11 w/Tupersan and apply at 5 bags per acre twice, 30 days apart. After that, apply RegalStar II for balance of season control. Tupersan will provide initial weed suppression during establishment. Replacing Starter with Tupersan vs. regular starter and adding RegalStar II.
Additional cost \$500.00 per acre
