WINTER DECLINE

Fall is here. Time to relax; not quite yet!

Late fall and early winter programs are some of the most important of the year. I call them Transition Management programs. We're managing the turf from fall into winter into spring.

Enclosed you will find some exciting results from Michigan State, University of Wisconsin, and Washington State University on adding Alette Signature (new name is now Chipco Signature) to your normal application of snow mold protection.

No matter what you use, simply add Chipco Signature at 11 lbs per acre to that tank mix. My favorite cocktail is to add a small amount of foliar feed and micro nutrients at the same time. This will aid in preventing winter desiccation and dehydration of the leaf and crown area.

The investment is small; reward – healthier turf next spring with better roots, insuring less spring diseases, especially Anthracnose. Try it!

Also, Aventis is offering some spiff money this Fall for a minimum three (3) case order by November 20, 2006. You get \$2.00 per lb rebate. You can have the check made out to your club, yourself, or maybe your favorite superintendent association as a donation. Three cases nets you \$132.00.

Sincerely,

Supreme Turf Products, Inc.
